

Nexus AI Edtech Solutions

FY26 Q2 Earnings & H2 Projections Report

Prepared for Internal Executive Review - July 2026

1. Executive Summary

We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity.

We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. The Enterprise Software division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs.

In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%.

Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Furthermore, our strategic expansion into

the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. The Enterprise Software division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting.

Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. The Enterprise Software division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting.

2. Financial Highlights & Trailing Metrics

The following tables represent the consolidated financial performance across our primary operating units. All figures are reported in USD (millions) unless otherwise stated. Note that R&D expenditure has been deliberately elevated to support the rollout of our new LangChain-powered conversational interfaces.

Q1 2026 (Actual) Performance Breakdown

Metric	North America	EMEA	APAC (Inc. India)	Consolidated Total
Gross Revenue	\$24.84M	\$11.39M	\$23.92M	\$60.15M
Operating Expenses	\$32.72M	\$18.13M	\$15.55M	\$66.4M
R&D Spend	\$38.11M	\$27.06M	\$14.37M	\$79.54M
Marketing & Sales	\$26.76M	\$25.5M	\$47.67M	\$99.93M
EBITDA	\$41.75M	\$38.49M	\$36.72M	\$116.96M

Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments.

Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design.

Q2 2026 (Actual) Performance Breakdown

Metric	North America	EMEA	APAC (Inc. India)	Consolidated Total
Gross Revenue	\$49.31M	\$11.48M	\$33.21M	\$94.0M
Operating Expenses	\$46.54M	\$12.39M	\$36.29M	\$95.22M
R&D Spend	\$47.69M	\$17.43M	\$47.84M	\$112.96M
Marketing & Sales	\$44.03M	\$37.93M	\$26.04M	\$108.0M

EBITDA	\$41.19M	\$37.34M	\$26.67M	\$105.2M
--------	----------	----------	----------	-----------------

Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines.

Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy.

Q3 2026 (Projected) Performance Breakdown

METRIC	NORTH AMERICA	EMEA	APAC (INC. INDIA)	CONSOLIDATED TOTAL
Gross Revenue	\$17.02M	\$22.8M	\$36.75M	\$76.57M
Operating Expenses	\$49.74M	\$26.75M	\$27.36M	\$103.85M
R&D Spend	\$30.18M	\$23.08M	\$41.54M	\$94.8M

Marketing & Sales	\$58.98M	\$29.37M	\$25.03M	\$113.38M
EBITDA	\$26.58M	\$27.91M	\$32.73M	\$87.22M

The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design.

Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity.

Q4 2026 (Projected) Performance Breakdown

METRIC	NORTH AMERICA	EMEA	APAC (INC. INDIA)	CONSOLIDATED TOTAL
Gross Revenue	\$49.97M	\$38.83M	\$31.43M	\$120.23M
Operating Expenses	\$20.32M	\$28.0M	\$24.92M	\$73.24M
R&D Spend	\$18.66M	\$26.52M	\$48.57M	\$93.75M

Marketing & Sales	\$39.75M	\$32.59M	\$32.09M	\$104.43M
EBITDA	\$42.57M	\$24.2M	\$39.99M	\$106.76M

Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging.

Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. The Regional Expansion division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%.

3. Strategic Infrastructure & Capital Expenditure

As our product ecosystem evolves to support complex, multi-agent AI architectures, our underlying compute infrastructure must scale proportionally. The shift from monolithic

applications to microservices orchestrated by robust frameworks has fundamentally altered our capex profile over the last 18 months.

Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. The Infrastructure scaling division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%.

Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging.

Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. The Infrastructure scaling division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%.

Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. The Infrastructure scaling division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs.

Critical Projection Note: Due to the unexpected expansion of our secure server farm in Frankfurt to comply with EU AI Act data residency requirements, the **Q3 2026 infrastructure capital expenditure is projected to spike to exactly \$14.73 million**. It should be noted that this cost will be partially offset by a \$2.1 million green energy tax rebate finalized last month.

Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design.

Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. The Compliance and Policy division has seen unprecedented growth in the trailing twelve months, driven largely

by adoption in emerging markets. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings.

Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. The Compliance and Policy division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. Looking ahead, the product roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines.

Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. Compliance with international data privacy standards remains a non-negotiable pillar of our architectural design. We note that the integration of automated code scanning and Copilot-assisted development has reduced our QA bottleneck by 34%. Looking ahead, the product

roadmap is heavily skewed towards deeply integrated conversational interfaces and deterministic AI outputs. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments.

Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. The Risk Management division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. In preparation for enterprise scaling, our product managers have pivoted towards data-driven feature flagging.

Management remains cautiously optimistic about the Q3 pipeline, assuming macro-economic stability in our primary operating regions. The Risk Management division has seen unprecedented growth in the trailing twelve months, driven largely by adoption in emerging markets. Our recent shift towards embedding Microsoft Copilot into our daily agile ceremonies has drastically improved sprint velocity. Operational efficiencies were realized through the deployment of autonomous agents and streamlined CI/CD pipelines. Agile frameworks, supported by AI-driven sprint planning tools, continue to be the backbone of our product management philosophy. Capital expenditure in this segment has been adjusted to account for increased compute demands, specifically surrounding vector database hosting. The newly structured DevOps architecture utilizing Groovy-based Jenkins pipelines ensures zero-downtime deployments. Furthermore, our strategic expansion into the Central India tech corridor, specifically establishing a center of excellence in Indore, has provided access to top-tier engineering talent. Sales executive hiring remains a top priority as we scale our outreach for our enterprise SaaS offerings.

Appendix A: Detailed SKU Performance Matrix

The following data sets outline the granular performance of individual agentic modules and software SKUs across our primary deployment zones.

Data Sub-Set 001: Enterprise SaaS Modules

SKU Identifier	Product Category	Q2 Volume	MOM Growth	Churn Rate	LTV:CAC Ratio
NEX-AG-50389	Copilot Assistant Mod 1	1404 units	+4.0%	0.3%	4.4x
NEX-AG-29870	Copilot Assistant Mod 2	7449 units	+7.0%	2.5%	2.8x
